Education

National Taipei University of Technology — Sep 2020 – Jul 2024
Bachelor of Electrical Engineering and Computer Science — *Taipei City, Taiwan*

Skills

Hardware	:	Microcontrollers (STM32, ESP32, Arduino), Embedded Systems, Circuit Design
Programming	:	C, C++, Python, JavaScript, ReactJS
Tools	:	Git, Linux, PyTorch, Visual Studio Code, NVIDIA Isaac Sim
Soft Skills	:	Analytical Thinking, Oral Communication, Project Management
Languages	:	English (Native), Thai (Native), Mandarin Chinese (Intermediate)

Work Experience

AP Computer Science Professor — Mar 2025 – Present
Grace International School - Contract — *Chiang Mai, Thailand*

- Taught AP Computer Science A & P curriculum, focusing on **Java & JavaScript** programming, algorithms, data structures, and object-oriented design.
- Designed and delivered lectures, coding exercises, and assessments aligned with College Board standards.

Digital Twin R&D Engineer — May 2024 – Oct 2024
Pegatron Corporation - Internship — *Taipei City, Taiwan*

- Developed a digital twin of a glue dispensing robot in **NVIDIA Isaac Sim**, enabling faster prototyping and reducing potential production errors.
- Created a web application with **REST APIs, JavaScript, and Python**, including an AI chatbot with voice recognition.

Projects

Ditto Bot — May 2025
Python — *Personal*

- Developed a modular Discord bot in Python using the discord.py library, supporting **asynchronous command handling** and **event-based architecture**.
- Implemented different features such as news updates, regex filters, database handling, slash commands, and custom embedding to allow for the bot to be used by many communities without conflict.
- Successfully deployed in a community of over **32,000 members**, with ongoing improvements driven by user feedback and real-world usage insights.

Collision Prevention System — Apr 2025
C/C++, Arduino & other electronics — *Personal*

- Built for robotic vehicles, this system helps smart vehicles navigate their surroundings and avoid obstacles.
- Includes multiple **electronic sensors** such as ultrasonic, infrared, and photoresistors—as well as various **output devices**, including an LCD display, LED lights, and a buzzer, all packaged into one convenient unit.

Axis: A Gyroscope-Controlled RC Car — Feb 2025
C++, ESP32 & other electronics — *Personal*

- Created a gyroscope-controlled RC car using **ESP32 microcontrollers** along with other electronic parts.
- Created two devices: A gyroscope glove and a remote-controlled car. The gyroscope glove communicates with the car using **Bluetooth**, allowing for a wireless and seamless connection.
