ELECTRICAL ENGINEER & DEVELOPER

I am a highly motivated EECS graduate with 2 years of experience in **JavaScript** and 1 year of experience in **C, C++, and Python**. I have experience in robotics, where I've worked with various electronics to build automated projects. Additionally, I have experience in web development, creating complete websites that integrate both front-end UI and back-end systems.

SKILLS

Hardware	: Microcontrollers, Embedded Systems, Circuit Design
Programming & Frameworks	: C, C++, Python, JavaScript, TypeScript, HTML, CSS, ReactJS, Three.js, .NET
Libraries & Tools	: Linux, Git, Redux, React Router, Visual Studio Code, NVIDIA Isaac Sim
Soft Skills	: Analytical Thinking, Oral Communication, Project Management
Languages	: English (Native), Thai (Native), Mandarin Chinese (Intermediate)

WORK EXPERIENCE

Digital Twin R&D Engineer <i>Pegatron Corporation - Internship</i>	Jul 2024 – Oct 2024 <i>Taipei City, Taiwan</i>
- Developed a digital twin of a glue dispensing robot in NVIDIA Isaac Sim, enabling faster prototyping and reducing potential production errors. - Created a dynamic web application with REST APIs, JavaScript, and Python, including an AI-powered chatbot with voice recognition, which enhanced user engagement and reduced load times by 30%.	
Vehicle and Backstage Systems Engineer <i>Chailease International Leasing Co. Ltd. - Internship</i>	Jun 2024 – Jul 2024 <i>Taipei City, Taiwan</i>
- Used the .NET framework to design backend vehicle systems. - Conducted end-to-end troubleshooting and debugging, resolving the majority of back-end issues to maintain smooth application performance and minimize downtime.	

PROJECTS

GRCC <i>C++, ESP32 & other electronics</i>	Nov 2024 – Jan 2025 <i>Personal</i>
- Created a gyroscopically remote controlled car using ESP32 microcontrollers along with other electronic parts. - Created two devices: A gyroscope glove and a remote-controlled car. The gyro device communicates to the car using bluetooth, allowing for a wireless and seamless connection.	
SnackStore <i>TypeScript, C#, React.js, Redux, .NET</i>	Feb 2024 – Jun 2024 <i>National Taipei University of Technology</i>
- Designed and developed a clean and modern E-commerce website using TypeScript, C#, React.js, Redux, and .NET. - Implemented functional design for features like a user authentication, database integration, and Stripe payments, achieving an increase in load speed by 30% through optimized API calls and caching.	
AI-Enhanced Website Biography <i>JavaScript, React.js</i>	Feb 2024 – Jun 2024 <i>National Taipei University of Technology</i>
- Designed a comprehensive biography website for a renowned Taiwanese scientist using JavaScript and React.js. This project garnered the scientist's attention and facilitated a professional connection. - Integrated AI chatbot and DALL-E image generation to provide real-time responses and interactive content, significantly enhancing user engagement.	

EDUCATION

National Taipei University of Technology <i>Bachelor of Electrical Engineering and Computer Science – GPA 3.12</i>	Taipei City, Taiwan Sep 2020 – Jul 2024
